## Since 1988

We have concentrated our efforts into the research of specific pigment ingredients and their relationship to our goal of manufacturing cosmetic colorants that are safe, predictable and remain true to color for many years.

**P**remier Pigments has been formulating and producing permanent cosmetic pigments for the intradermal cosmetic industry since 1988. Years of research coupled with practical application of colorants, modern technology and our application laboratory testing have resulted in an outstanding line of highly viscous concentrated colorants that are now more true and consistent than ever before.

## Since 1988

We are committed to the manufacturing and distribution of superior cosmetic pigment that are safe, backed by scientific integrity and provide long-term color stability to all recipients of cosmetic tattoo procedures.

**Predictable Color** - Premier Concentrated Original Formula Colors are now more predictable and true to color than ever before. We are focused on longevity of color. Colors heal true and stay true!

**Safety** - Premier Pigments enjoys a preeminent reputation in the development and quality of the world's finest permanent cosmetic pigments. We are the market leader in permanent cosmetic pigment sales and leader for research of pigment ingredients. Premier Original Colors have been widely used throughout the world since 1988 and are formulated with pigments with a long history of no known allergic reactions.

**Large Particle Pigments** - Larger particles reflect more light and appear more opaque. They are also less susceptible to pigment particle movement, commonly referred to as migration.

**Quick to Implant** - Large particle pigments are suspended in an aqueous dispersion for better color efficiency. In other words, Premier Concentrated Original Formula Colors yield more color per implant, saving time and touch-up applications.

**State-of-the-art Manufacturing** - Premier Concentrated Original Colors are manufactured by a true state-of-the-art process to create pigment dispersions of greater tinctorial strength, brighter, and more true to color than ever before.
